NCSR “Demokritos”

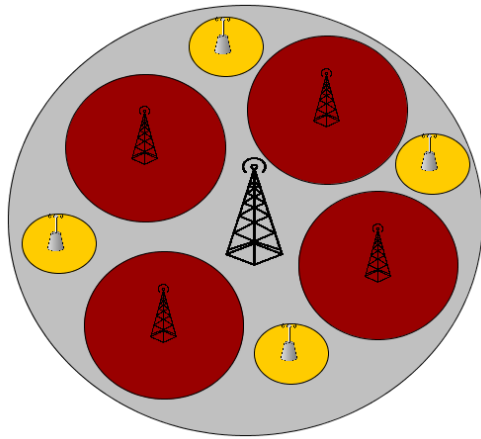

5G on the horizon

Service-oriented 5G view

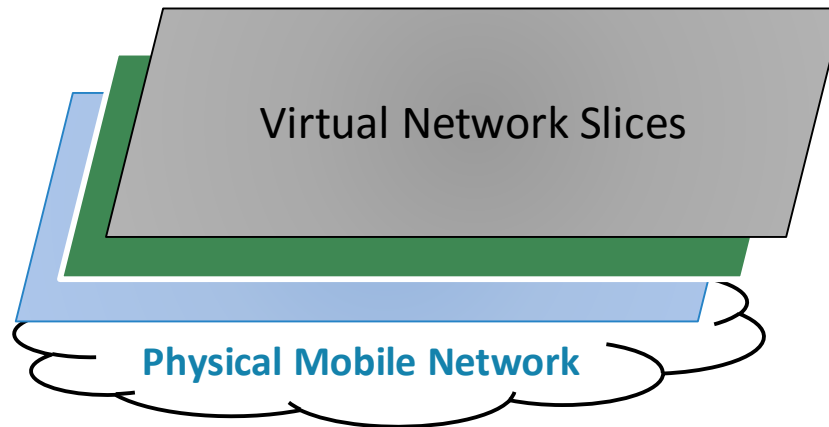

Dimensions of innovation

Dense networks

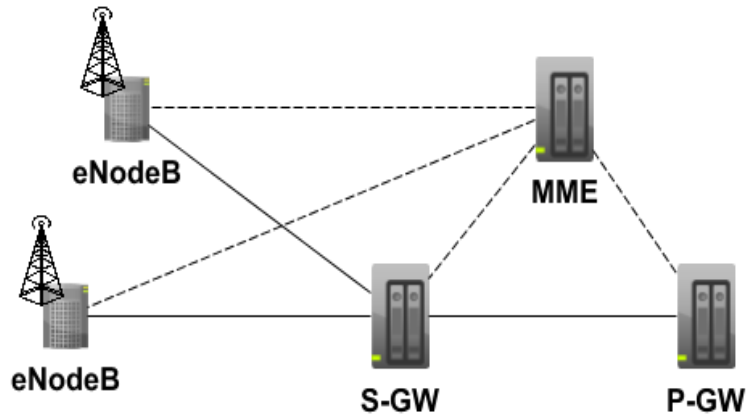

New Radio Access Technologies
and Spectrum Bands

Flexible support for multiple (diverse/new/agile)
services and operators

Towards a service-oriented 5G architecture

Fixed and Rigid

Conventional One-size Fits All
Mobile Network Architecture

Towards a service-oriented 5G architecture

Fixed and Rigid

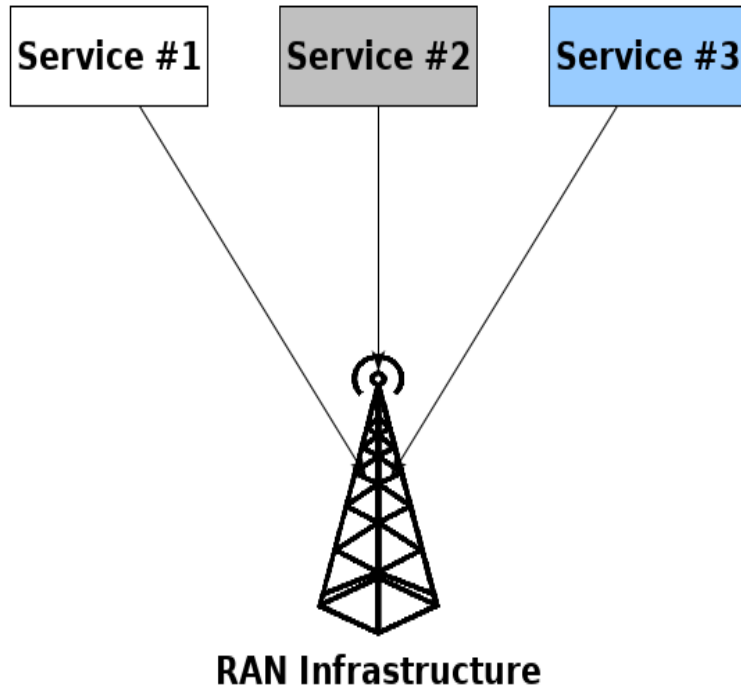

Conventional One-size Fits All Mobile Network Architecture

Flexible and Customizable

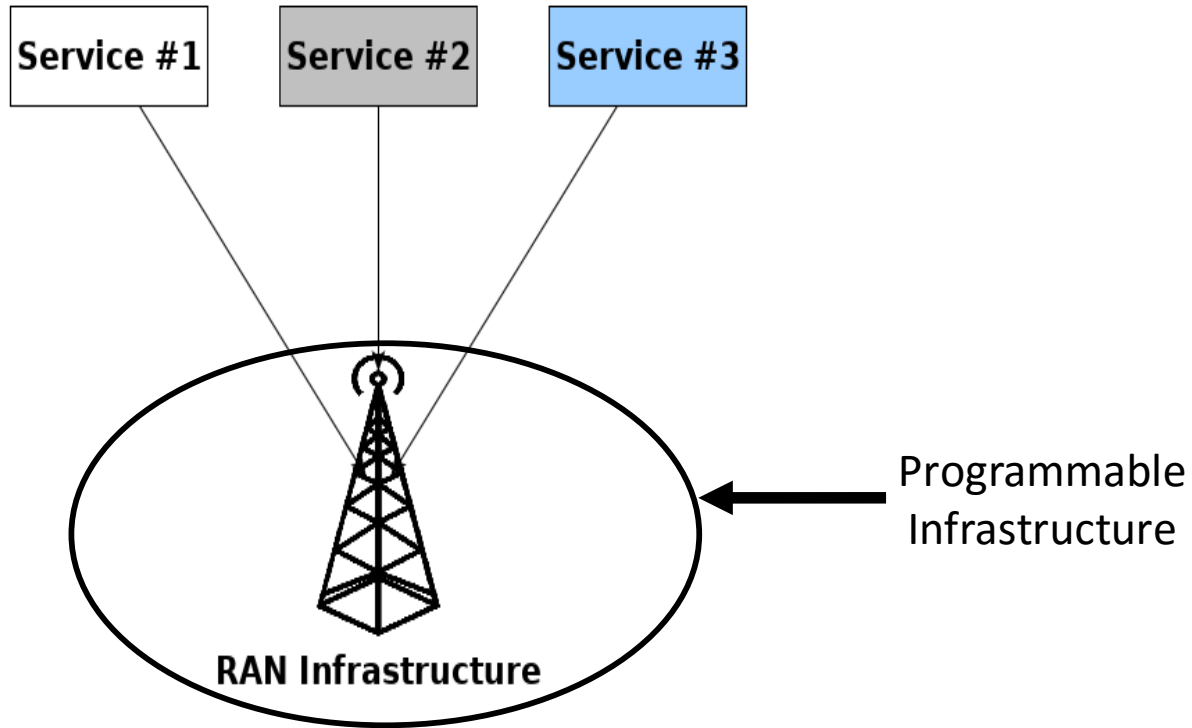

End-to-end Network Slicing Architecture

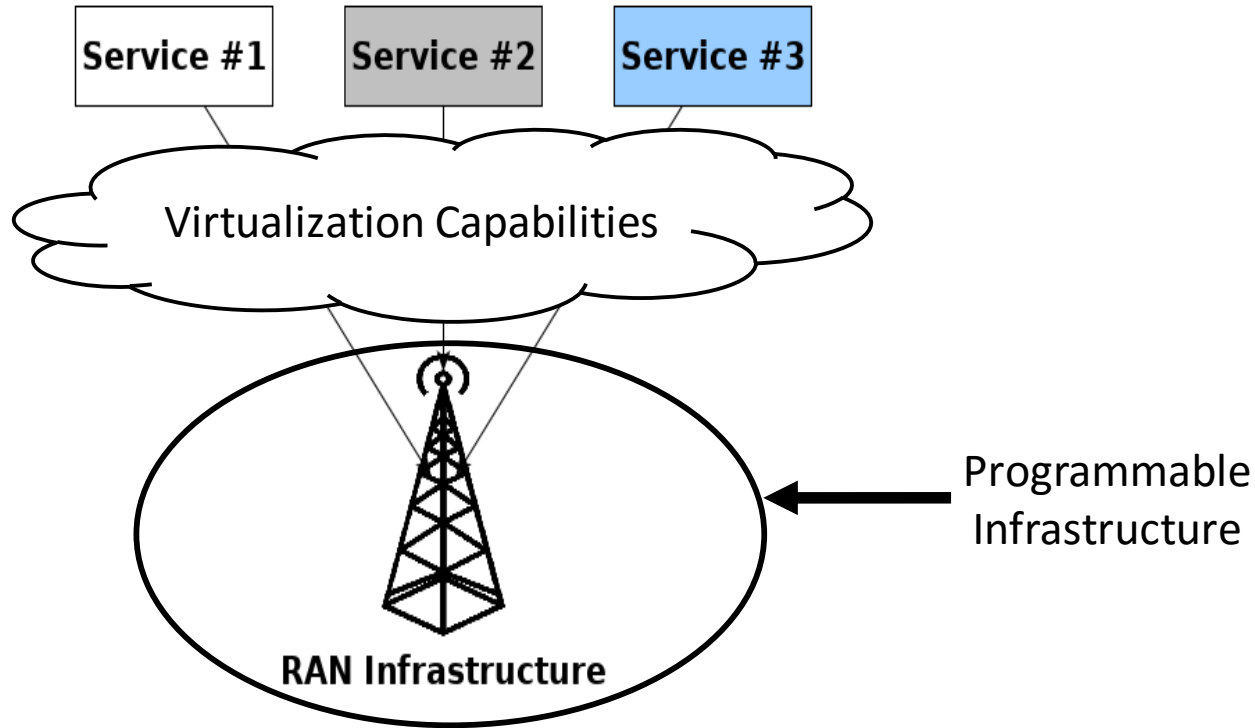

Slicing the RAN

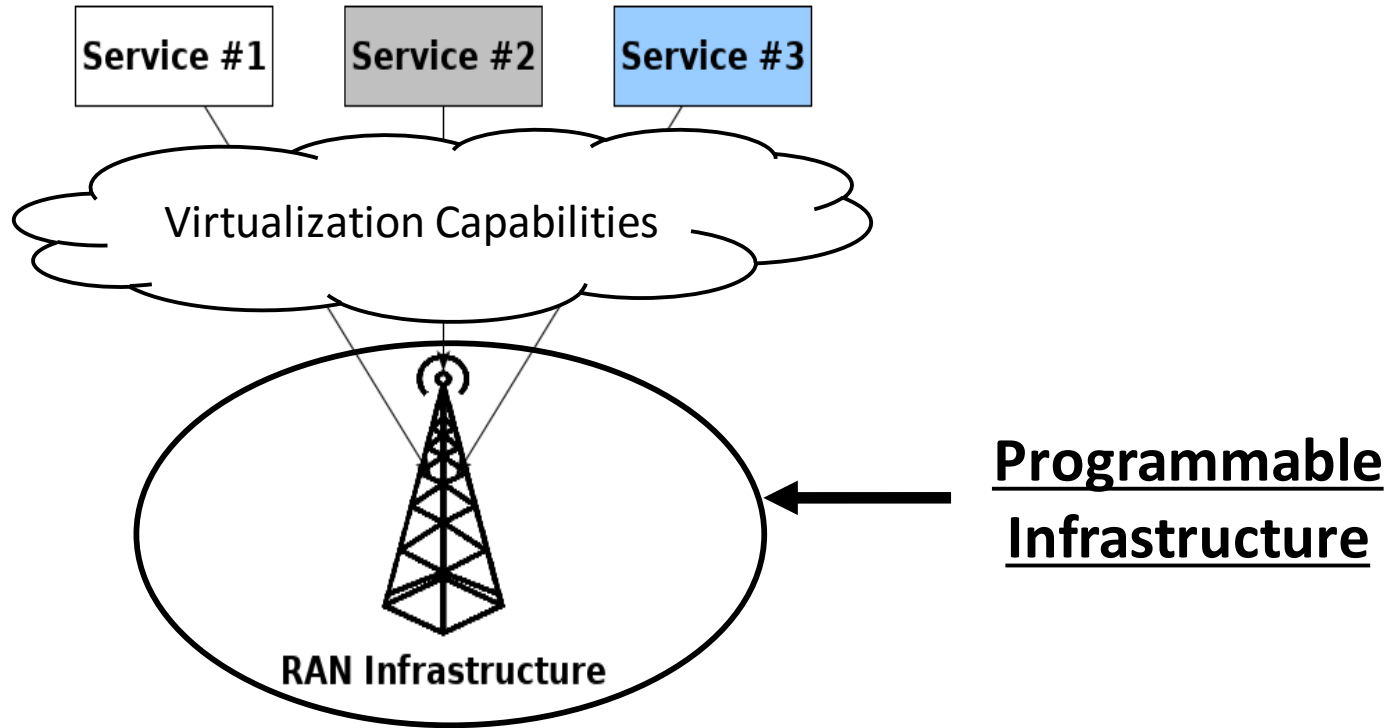

Slicing the RAN

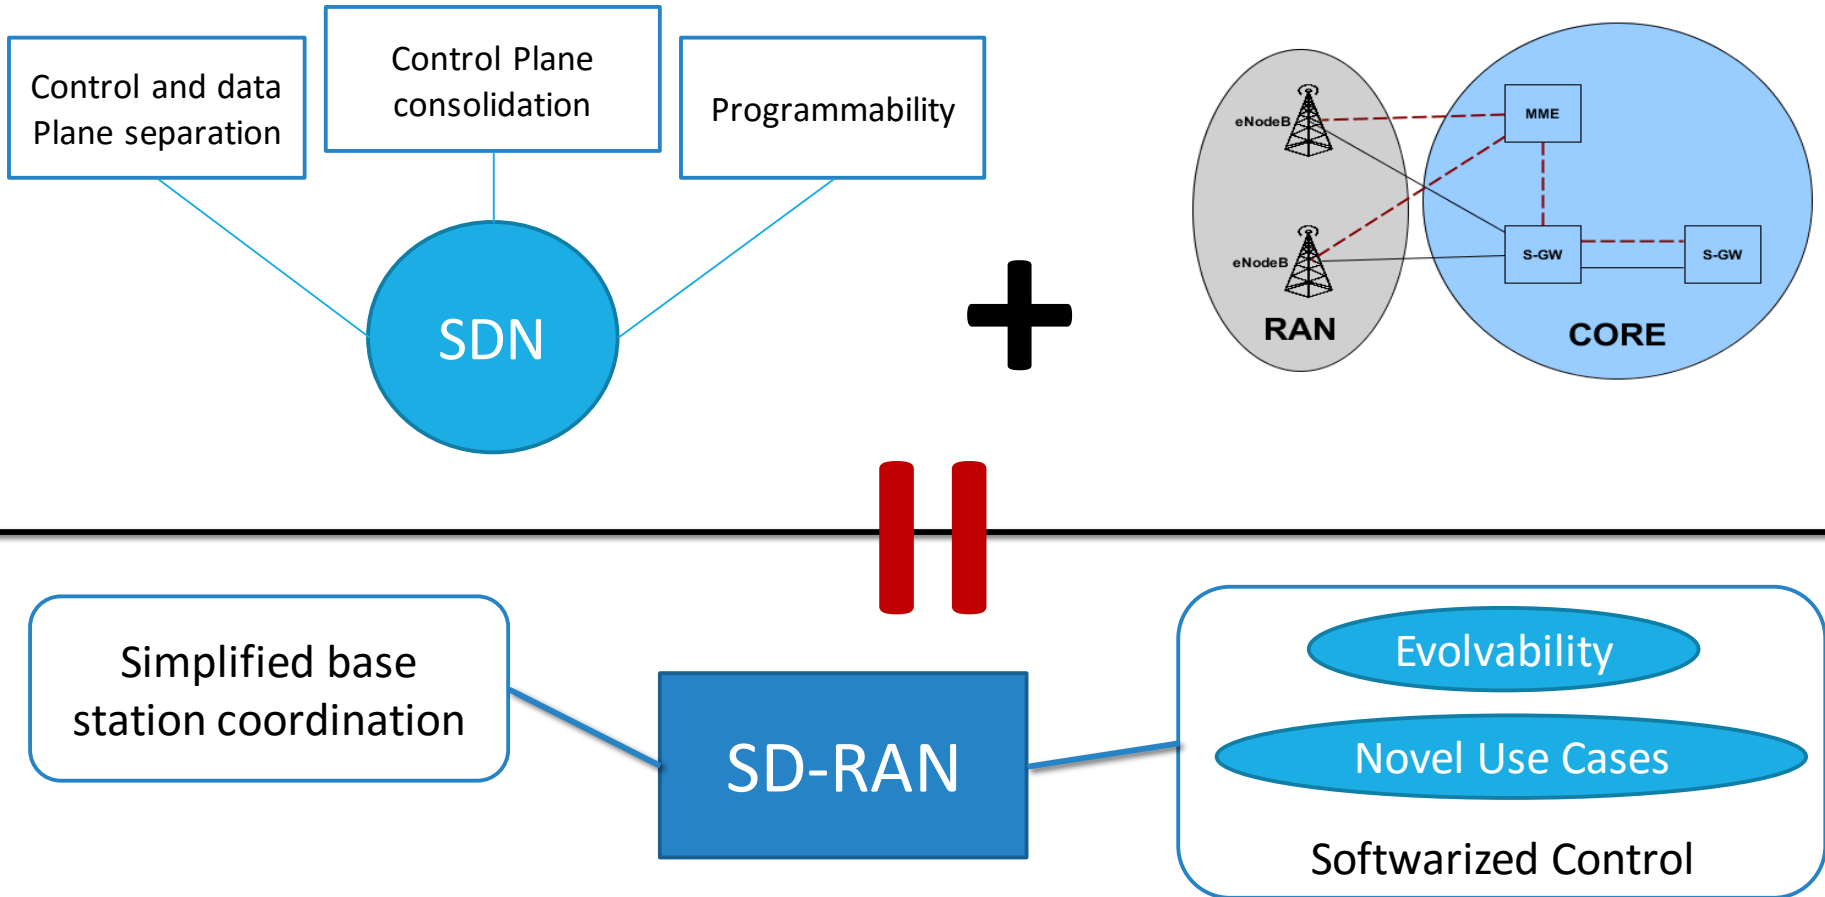

Slicing the RAN

Slicing the RAN

Software-Defined Radio Access Networks (SD-RANs)

Our contribution: **FlexRAN** (CoNEXT '16)

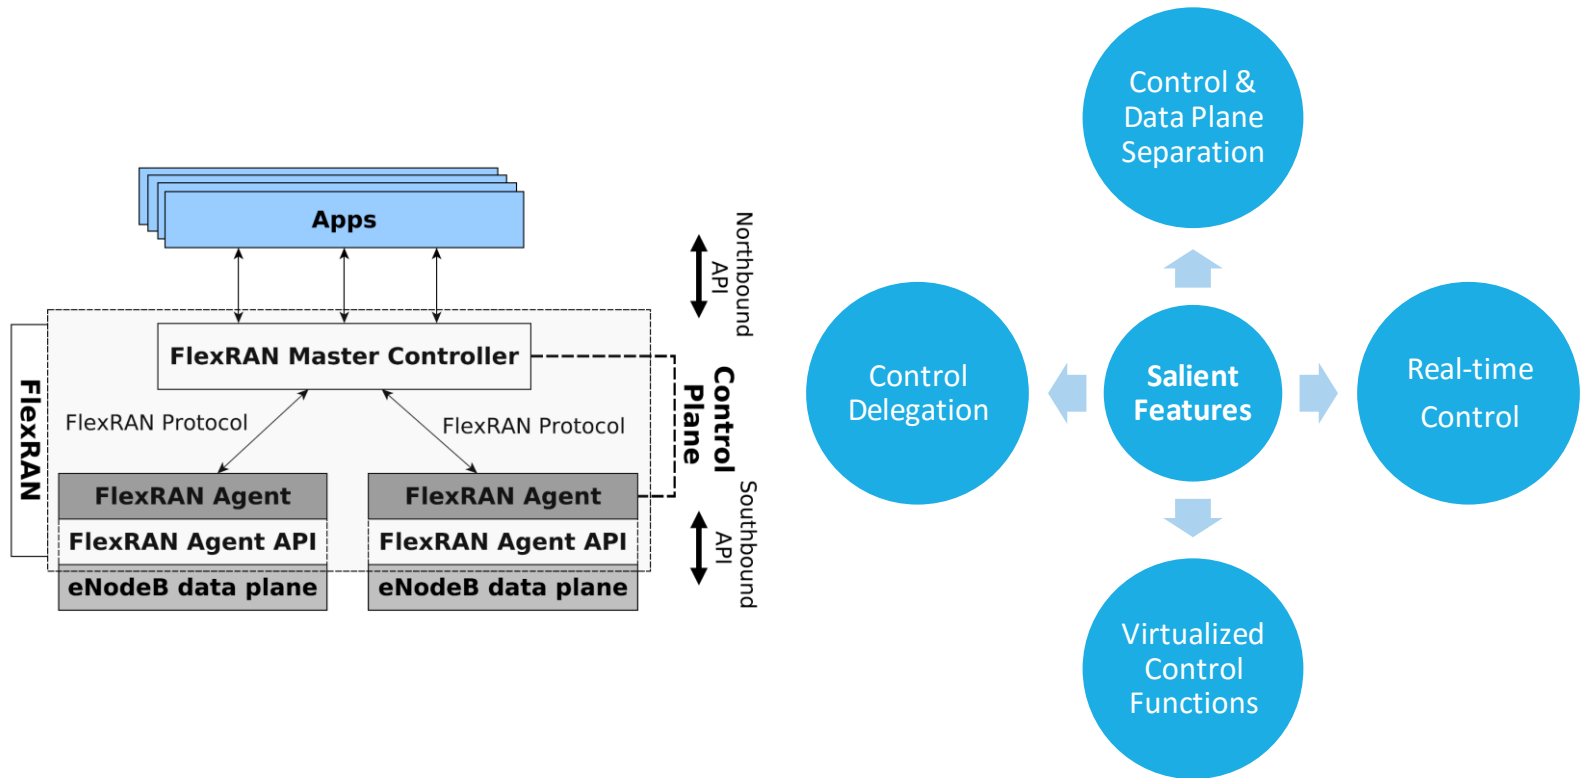

First concrete **open source** SD-RAN platform for experimentation

Realizable SD-RAN
design

Support for real-time
RAN control

Flexible and
Programmable RAN
architecture

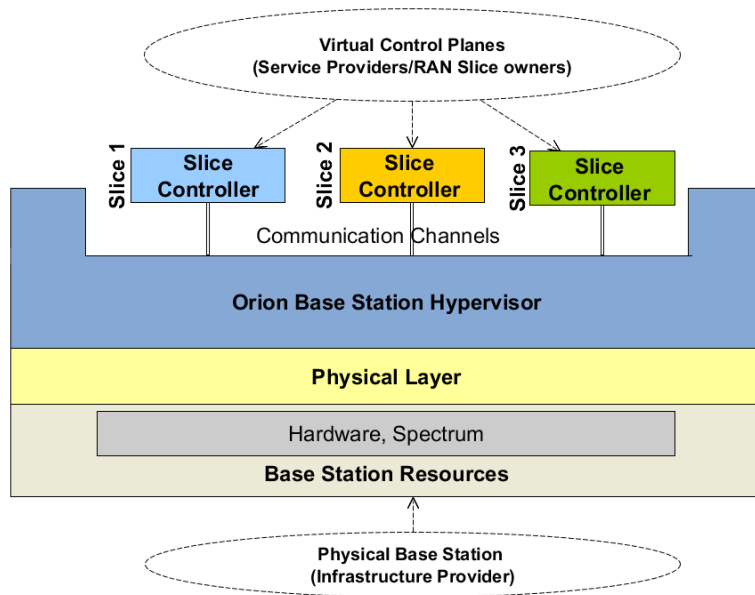

FlexRAN Overview

Slicing the RAN

Virtualizing the RAN: Orion (MobiCom '17)

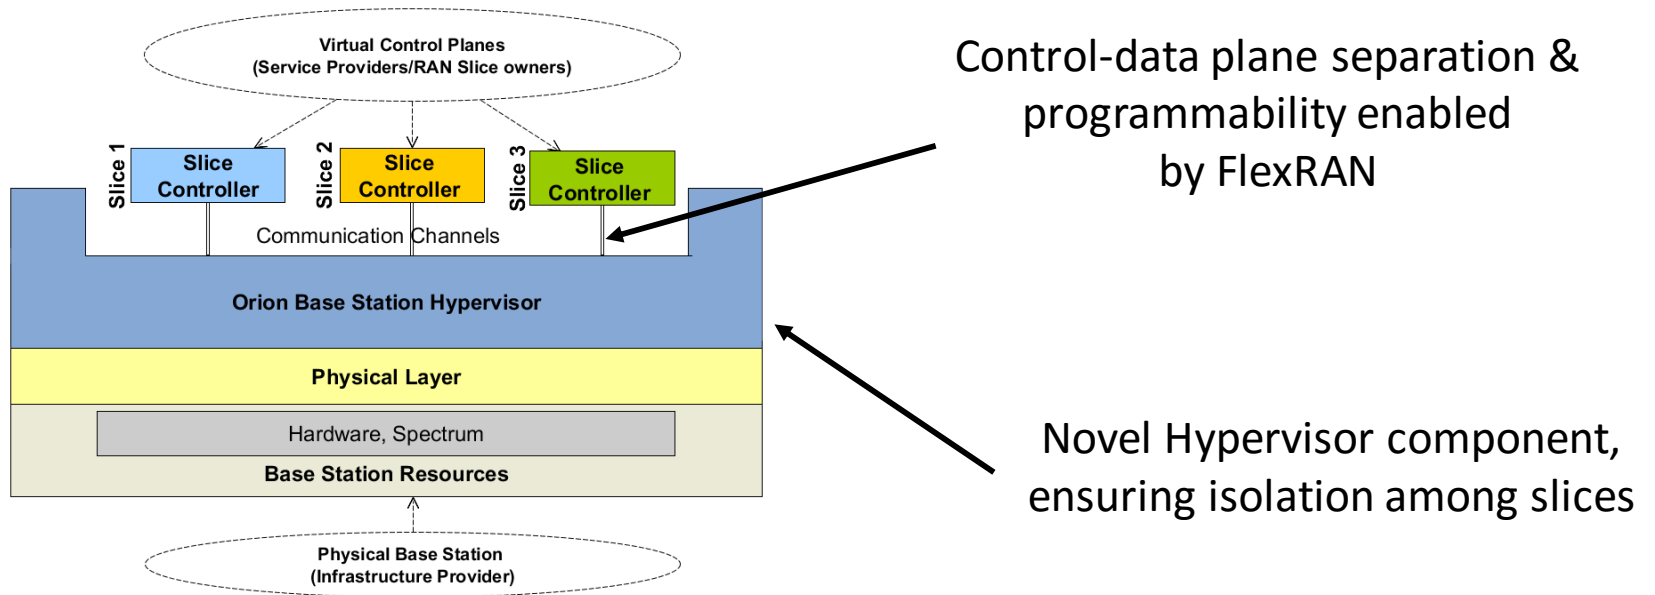

Orion RAN slicing system

Efficient sharing of
radio and spectrum
resources

Functional and
Performance Isolation

Key Virtualization Enablers

Conclusions

RAN Programmability and Virtualization are expected to play a vital role in 5G networks

- Network slicing & multi-service support

FlexRAN SD-RAN platform

- First concrete open source SD-RAN implementation
- More information at:
 - <http://networks.inf.ed.ac.uk/flexran/>

Orion RAN slicing system

- Enabler of RAN virtualization for multi-service networks
